

# NATURAL RESOURCES ENGINEERING

Gress Engineering, PC provides a wide range of services to its mining and reclamation related clients. By providing such an array of services, Gress can complete most mining related projects in-house.

Gress not only provides professional mining and civil engineering services, but also provides surveying and ecological services. Our project experience has included both surface and underground mining operations. The projects have ranged from small 2-acre underground permits to several hundred acre surface mining permits, preparation plants and refuse disposal facilities.

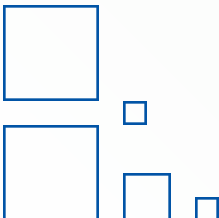

## PERMITTING AGENCY APPROVALS

KY Division of Mine Permits - KY Division of Water - US Army Corp of Engineers - US Mine Safety and Health Administration - VA Division of Mined Land Reclamation - VA Department of Environmental Quality  
WV Department of Environmental Protection

## PERMITTING AND PERMIT MAINTENANCE

Gress prides itself on being a firm that can provide turn-key permitting and permit maintenance services to its clients. We can take a project from the initial reserve study, through permit approval, on-going mining, and to eventual bond release. We can provide all construction certifications as well as mining/construction related surveying (excluding property surveying). For an underground mine, we can perform all necessary underground survey and mapping work.

We are within driving distance to the coalfields of southern and central Appalachia. High speed internet access allows ease of transporting large drawings and files to and from our clients and state agencies.
